1

The course 

**Recommendations:**

- Download the course handouts
- Follow along and make notes on the handouts
- Take your time – you have 10 weeks
- View the units several times (you can go back multiple times)
- Let us know if we have made any mistakes (we are not quite perfect yet)
- Enjoy the course and tell others

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

2

## Program goals

- **What you will get:**
  - Understand the basic science of X-ray, CT, MRI, Diagnostic Ultrasound
  - Identify the commonly used imaging views of the musculoskeletal system
  - Understand the fundamental process of image interpretation and practice these skills
  - Know and apply published **utilization** guidelines for medical imaging
  - Appreciate the **utility** of various medical imaging studies
  - Integrate imaging results into your existing practice

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

3

## Program goals

- **What you won't get:**
  - The skills needed to interpret medical diagnostic images independently
  - The right to order medical imaging (unless allowed by Provincial legislation & Regulatory College)

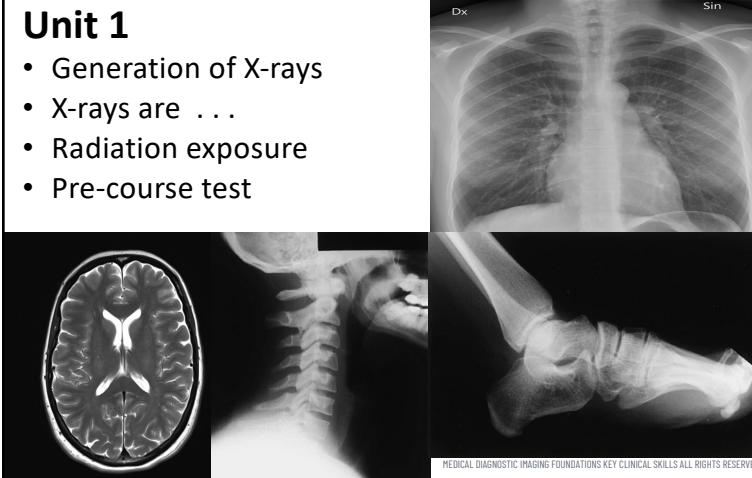

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

4

## Medical Imaging foundations

### Unit 1

- Generation of X-rays
- X-rays are . . .
- Radiation exposure
- Pre-course test

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

5

## X-rays

- Discovered by Wilhelm Conrad Roentgen in 1895
- High energy – low wavelength ionizing radiation
- Measured in:
  - Roentgens
    - (the x-ray beam's ability to ionize air)
  - Rads
    - How much radiation the patient absorbs from the beam
  - Radms
    - The effect of that radiation on the person's body
- 1 roentgen = 1 rad = 1 radm

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

6

## X-rays are . . .

### X-rays are . . .

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

The slide features a title 'X-rays are . . .' at the top left. To the right is the KCS logo with the tagline 'KEY CLINICAL SKILLS'. Below the title is a horizontal blue line. The main content is a 3D-rendered square with the number '2D' in blue on its top surface. The background is white. At the bottom right, there is a small copyright notice: 'MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED'.

11

### 2D images of 3 D objects

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

The slide features a title '2D images of 3 D objects' at the top left. To the right is the KCS logo with the tagline 'KEY CLINICAL SKILLS'. Below the title is a horizontal blue line. The main content is a 3D-rendered cube. The top face is grey and has '2D' in blue. The left side face is grey and has 'to' in blue. The front face is yellow and has '3D' in blue. The background is white. At the bottom right, there is a small copyright notice: 'MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED'.

12

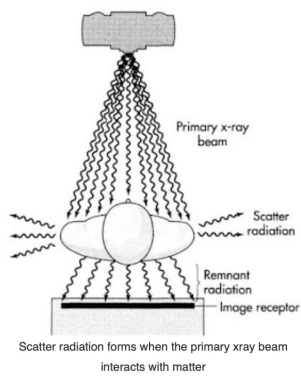

13

14

## Production of images

- Object to be imaged placed between beam and receptor in standardized position
- The shadow of the radio opaque tissues is then seen as a negative image

Scatter radiation forms when the primary xray beam interacts with matter

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

15

## Production of X ray images

**“Attenuation”** is the degree to which X-rays are absorbed or deflected by the tissues

- Bones have a high atomic weight and effectively “block” X-rays from passing through.
- The less X-rays passing through the lighter the image (remember it is a “negative”)

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS

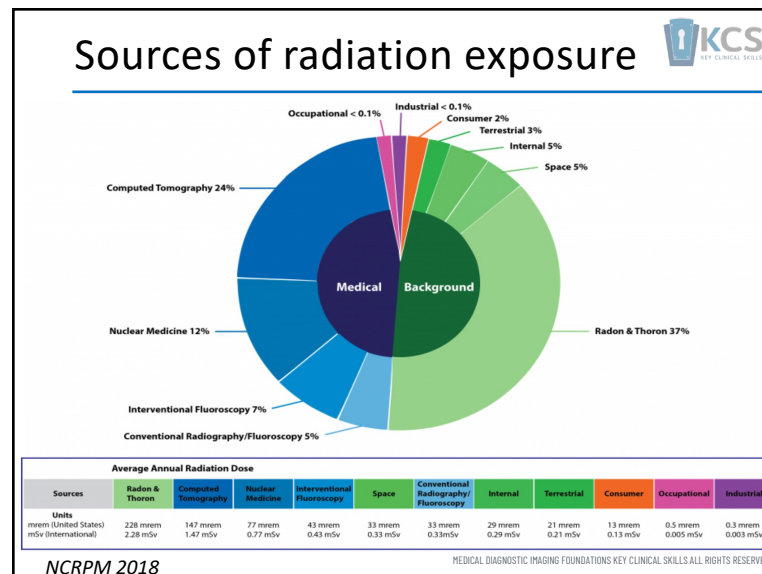

16

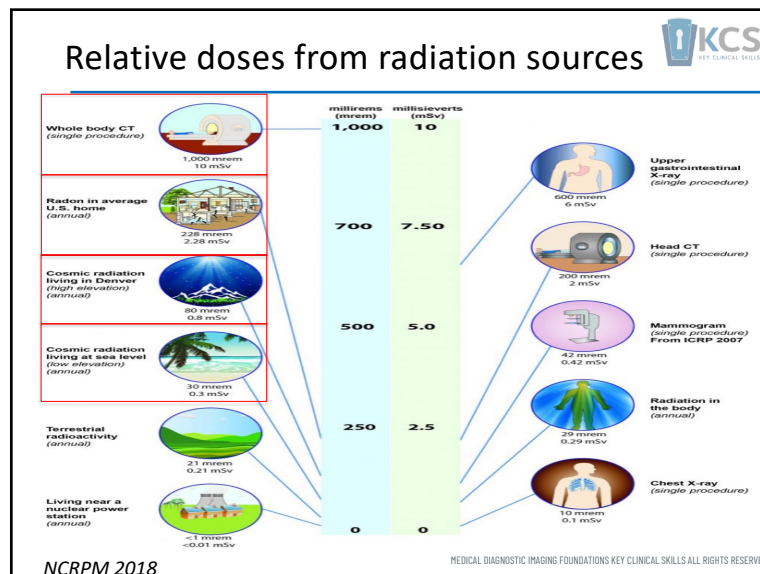

NCRPM 2018

17

NCRPM 2018

18

19

### Typical scan doses

Examination	Effective dose (mSv)	Milli rem
Chest x ray	0.1	10
Head CT	1.5	150
Screening mammography	3	300
Abdominal CT	5.3	530
Chest CT	5.8	580
Chest, abdomen pelvis CT	9.9	990
CT Colon	3.6-8.8	360-880
Barium enema	15	1500
Neonatal abdominal	20	2000

For comparison, survivors of the atomic blast at Hiroshima & Nagasaki were exposed to an average of 40mSv. Dependent on the patient and technique used, these levels are roughly equivalent to 2 -3 CT scans of the lumbar spine

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

20

### Conventional Radiography

Decision making considerations	Advantages	Disadvantages	Primary uses	Variations
First-order diagnostic imaging modality Need at least 2 views at 90 deg.	Low cost Widespread availability Produces excellent skeletal images	Uses ionizing radiation Often over utilized Less sensitive to subtle pathology	Screening for & visualization of pathology of bone and joints (fractures, dislocations, neoplasms, arthritides) Monitoring fracture healing Visualization of orthopaedic hardware	Fluoroscopy Arthrography Myelography Discography

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

21

### A little pre-course self-test

What is the view?

### What view is this?

- A. Antero-posterior
- B. Lateral
- C. Oblique
- D. Thoraco-lumbar

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

26

**?** A little pre-course self-test 

### What view is this?

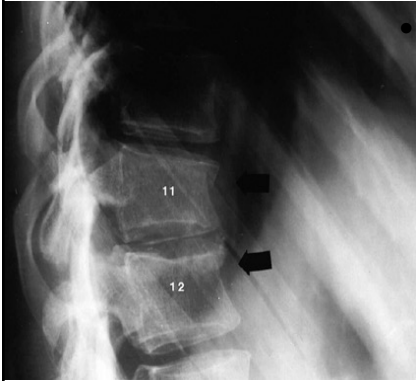

- D. Thoracolumbar
- A thoracolumbr view is a “coned” or close-up view of the thoracolumbar vertebrae, which are often the site of traumatic injury.

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

27

**?** A little pre-course self-test 

### What is the pathology

- A. Osteoporosis
- B. Vertebral body compression fractures
- C. Tuberculous osteomyelitis

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

28

 A little pre-course self-test 

## What is the pathology

B. Vertebral body compression fractures

- Imposed compressive forces on the spine convert to flexion forces and can result in anterior shearing of the vertebral disk, which may avulse the bony rim of an endplate and displace it anteriorly.

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

29

 A little pre-course self-test 

## What's the view?

35

 What view is this? 

---

A. lateral foot  
B. antero-posterior oblique mortise view  
C. lateral ankle

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

36

## What view is this?

### C. lateral ankle

- This sagittal view of anatomy makes it a lateral projection; the inclusion of the lower half of the leg, and exclusion of the distal half of the foot, designates this as an ankle, not foot, examination.

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

37

## What do the black arrows point to?

- A. displaced fibular fragment
- B. fracture of the anterior rim of the tibia
- C. fracture of the posterior rim of the tibia

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

38

**?** What do the black arrows point to?

KCS  
KEY CLINICAL SKILLS

A. displaced fibular fragment

- This is an oblique fracture of the fibular shaft at the junction of the middle and distal thirds of the shaft. It is oblique, not transverse, because the fracture line is diagonal to the long axis of the shaft. The fracture is complete, not incomplete, because the distal fragment is posteriorly displaced and therefore all the cortices must be fractured.

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

39

**?** What do the white arrows point to?

KCS  
KEY CLINICAL SKILLS

A. displaced fibular fragment  
B. fracture of the anterior rim of the tibia  
C. fracture of the posterior rim of the tibia

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

40

**?** What do the white arrows point to?

**KCS**  
KEY CLINICAL SKILLS

C. fracture of the posterior rim of the tibia

- The posterior rim of the tibia is often referred to as the "third malleolus" and is often fractured in conjunction with the medial malleolus, lateral malleolus, or fibular shaft.

65

The  
only  
thing  
that's  
worse  
than **one**  
is  
none

66

## Quality of image if dependent on!

- Thickness of body part
- Motion during image capture
- Scatter of beam
- Magnification of image
- Distortion of image

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

67

## Thickness of body part

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

68

## Motion

- Movement will cause blurring and distortion
- These factors are mitigated by:
  - Shorter exposure time
  - Intensifying screens

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

69

## Scatter

- Scatter is produced by deflection of the beam.
- A scatter reduction grid will significantly reduce this effect.

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

70

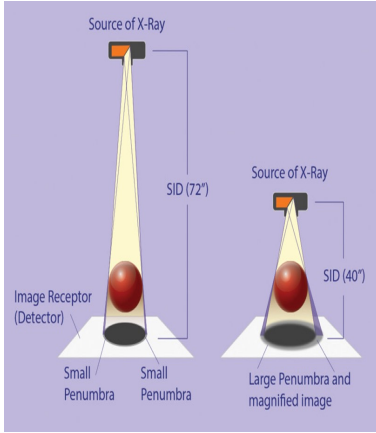

## Magnification

### Size

Primary factors are:

- Distance between beam source and patient
- Common practice is to use 100 cm
- The closer the image is to the receptor the less the magnification distortion and the better the detail

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

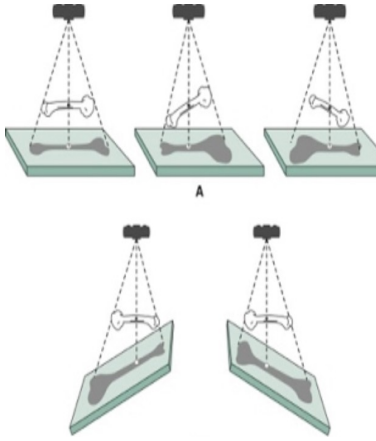

71

## Distortion

### Shape

- Unequal magnification of the structure
- Receptor angled relative to object
  - Elongated
  - Foreshortened
  - Only at the central ray is the beam perpendicular and should be closest to accurate

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

72

## Projections, Positions, Viewing

**Projection of beam**

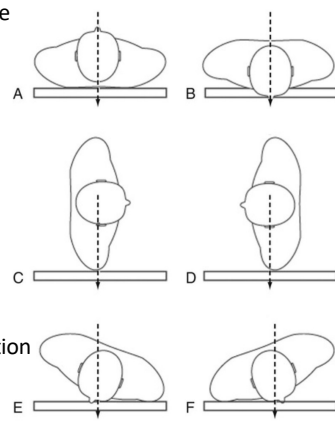

- Named after body part closest to image receptor
- Generally A-P  
(except at hands & chest P-A)
- Reduces effect of parallax

**Position of patient**

- Patient's body position
  - "Upright, seated, supine"
- Which body part is closest to receptor
  - "Right anterior oblique" (RAO)

**Viewed**

- Always viewed as if in anatomical position (facing patient)
- Imagine you are speaking with them**

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

73

## Skeletal radiology terminology

<h3>Osteoblastic</h3> <ul style="list-style-type: none"> <li>• Radiopaque</li> <li>• Opacity</li> <li>• Sclerosis</li> <li>• Hypertrophic bone</li> <li>• Increased radiodensity</li> <li>• Blastic lesion           <ul style="list-style-type: none"> <li>– Reparative</li> <li>– Reactive bone</li> </ul> </li> </ul>	<h3>Osteoclastic</h3> <ul style="list-style-type: none"> <li>• Radiolucent</li> <li>• Lucency</li> <li>• Rarefaction</li> <li>• Osteopenia</li> <li>• Decreased radiodensity</li> <li>• Demineralization</li> <li>• Lytic lesion           <ul style="list-style-type: none"> <li>– Bone destroying</li> </ul> </li> </ul>

74

## Interpretation pitfalls

- 20-40% of statements made on reports by radiologists and radiology residents were found to be erroneous when reviewed independently.
- Many of these errors were related to life-threatening consequences

*Brady 2017* MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

75

## Interpretation pitfalls

- 20-40% of statements made on reports by radiologists and radiology residents were found to be erroneous when reviewed independently.
- Many of these errors were related to life-threatening consequences

**Caused by:**

- Errors of observation: Incomplete or faulty search patterns **(the Radiologist)**
- Errors of interpretation: Failure to link abnormal radiologic signs to relevant clinical findings **(the Clinician)**

*Brady 2017* MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

76

## Examination of radiographs

### 5 possible outcomes

1. Positive for suspected diagnosis
2. Negative for suspected diagnosis
3. Negative for 1 diagnosis but raises suspicion of alternate
4. Wrong
5. Inconclusive requiring additional investigation

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

### Trabeculae

- Changes in trabecular appearance often early indication of mineralization changes of bone
  - Fluffy – often seen in Paget's disease and hyperparathyroidism
  - Smudged- indistinct trabeculae characteristic of osteomalacia

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

110

## B = Bone

### Trabeculae

- Changes in trabecular appearance often early indication of mineralization changes of bone
  - Fluffy – often seen in Paget’s disease and hyperparathyroidism
  - Smudged- indistinct trabeculae characteristic of osteomalacia
  - Coarsening – often seen in chronic renal failure and osteoporosis
  - Lacy (delicate) – secondary to Cooley’s anemia

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

111

## B = Bone

Evaluation	Normal findings	Variations/Abnormalities
General bone density	Sufficient contrast between soft-tissue shade of gray and bone shade of gray Sufficient contrast within each bone, between cortical shell and cancellous centre	General loss of bone density resulting in poor contrast between soft tissues and bone Thinning of or absence of cortical margins
Texture Abnormalities	Normal trabecular architecture	Appearance of trabeculae altered; may look thin, delicate, lacy, smudged, coarsened, fluffy
Local bone density changes	Sclerosis at areas of increased stress such as; weight bearing surfaces or sites of ligamentous, muscular or tendinous attachments	Excessive sclerosis Reactive sclerosis that “walls off ” a lesion Osteophytes

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

112

- Predictors

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

113

## C - Cartilage

---

### Joint Space

- Width
- Symmetry

### Subchondral Bone

- Contour
- Density

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

114

## C - Cartilage

### Joint Space

#### Width

- A well preserved joint space implies normal cartilage or disc thickness
- Decreased joint space implies loss of cartilage or disc thickness as a result of degenerative process

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

115

## C - Cartilage

### Joint Space Symmetry

- Normal symmetry implies an even weight distribution pattern of loading
- Asymmetrical loss of space indicates increased loading in one joint compartment

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

116

## C - Cartilage

**Subchondral bone**

- **Increased sclerosis**
  - Seen in degenerative arthritides as new bone is formed to help offset loss of joint cartilage
- **Erosions**
  - In inflammatory arthritides (RA, Gout) there is no reparative sclerosis but radiolucent cysts

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

117

## C - Cartilage

**Epiphyseal plates**

- Size of the epiphyses should be related to the skeletal and chronological age
- Borders of the epiphyses should have a band of sclerosis indicating increased bone activity from growth
- Position of plates as designated by the relationship of the ossified portion of the secondary epiphysis to the metaphysis

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

118

## C - Cartilage

Evaluation	Normal findings	Variations / Abnormalities
Joint space width	Well preserved joint spaces Even space across joint surfaces	Decreased joint spaces Uneven space across the joint surface
Sub-chondral bone	Smooth surface	Excessive sclerosis (implies DJD) Erosions (implies RA etc.)
Epiphyseal plates	Normal size relative to epiphysis and chronological /skeletal age	Compare contra-laterally for changes in thickness that may be related to abnormal conditions or trauma

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

121

## S = Soft Tissue

---

### Fat Pad Sign

“Sail sign”

- Fat normally outside the synovium
- Typically "hidden"
- Usually not visible
- Intra-articular hemorrhage forces fat out of the fossa
- Triangular radiolucent shadows

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

122

## S = Soft Tissue

### Foreign bodies

- Internal fixators
- Surgical instruments
- Gun shots
- Aspirated objects
- Ingested objects

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

123

## S = Soft Tissue

### Gas

- May be produced by advanced infection "Gas gangrene"
- May have been induced externally (Poor injection technique, high pressure air)

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

124

S = Soft Tissue		
Evaluation	Normal findings	Variations / Abnormalities
Muscles	Normal size relative to epiphysis and skeletal/chronological age	Gross wasting Gross swelling
Fat pads and fat lines	Radiolucent crescent parallel to bone Radiolucent lines parallel to muscle	Displacement of fat pads from bony fossae Elevation or blurring of fat planes
Periosteum	Normally indistinct Solid periosteal reaction normal at fracture sites	Solid Laminated Onion skin Spiculated Sunburst Codman's triangle
Miscellaneous soft-tissue findings	Soft tissues normally water density shade of grey	Foreign bodies Gas bubbles appear radiolucent Calcifications appear radiopaque

Predictor variables for bone and joint lesions ("Daffner's 11")	
<h3>1. Behaviour of the lesion</h3> <ul style="list-style-type: none"> <li>• Osteoblastic               <ul style="list-style-type: none"> <li>– Sclerosis</li> <li>– Increased mass</li> <li>– Osteophytes</li> </ul> </li> <li>• Osteolytic               <ul style="list-style-type: none"> <li>– Geographic (destroying large areas of bone in one location)</li> <li>– Permeative (destroying multiple smaller areas of bone in no confined area)</li> </ul> </li> </ul>	

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

126

Predictor variables for bone  
and joint lesions (“Daffner’s 11”)

## 2. Bone or joint involved

- Various types of arthritis and tumors tend to have predilection for certain bones/joints
  - RA in the hands
  - OA in the hips
  - Osteosarcoma in distal femur

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

127

Predictor variables for bone  
and joint lesions (“Daffner’s 11”)

## 3. Locus with the bone

- Epiphysis
- Metaphysis
- Diaphysis
- Articular surfaces

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

128

Predictor variables for bone and joint lesions (“Daffner’s 11”)

---

## 4. Age, Gender

- Certain arthritides are more common in different age groups
  - Ankylosing spondylitis onset under 45 yrs)
- Genders
  - OA more common in women
  - AS more common in men

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

129

Predictor variables for bone and joint lesions (“Daffner’s 11”)

---

## 5. Margins of lesion

- Sharp or well-defined lesions tend to be benign / slow growing
  - The bone has had time to wall off the lesion)
- Poorly defined lesions tend to be aggressive and possibly malignant

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

130

Predictor variables for bone  
and joint lesions (“Daffner’s 11”)

## 6. Shape of lesion

- Longer shaped lesions are generally benign
- Wider shaped lesions are generally more aggressive and possibly malignant

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

131

Predictor variables for bone  
and joint lesions (“Daffner’s 11”)

## 7. Crossing of joint space

- Tumors rarely cross joint (or disc) spaces
- Infections and inflammatory processes can cross the joint (or disc) space

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

132

Predictor variables for bone  
and joint lesions (“Daffner’s 11”)

## 8. Bone reaction

Bone can react to a disease process by:

- Reactive sclerosis which walls off the lesion
- New growth (sclerosis) to fortifying the area to meet the increased stress
- Buttressing (osteophyte growth) to increase the weight bearing area of a joint

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

133

Predictor variables for bone  
and joint lesions (“Daffner’s 11”)

## 9. Matrix production

The substance of a tumor’s matrix can help identify the type of tumor

- Chondroid matrix - (popcorn-like) calcifications are seen in tumors invading soft tissue
- Osteoid matrix is typical of osteoid osteoma
- Mixed matrix

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

134

Predictor variables for bone  
and joint lesions (“Daffner’s 11”)

## 10. Soft tissue changes

- Edema or hemorrhage can indicate underlying fractures. Displaced fat pads are associated with trauma
- Tumors often disrupt tissue planes

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

135

Predictor variables for bone  
and joint lesions (“Daffner’s 11”)

## 11. History

- Trauma
- Overuse
- Surgery
  - Where
  - When
  - What
- Idiopathic
  - Gradual onset
  - Rapid onset

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

136

## Predictor variables for bone and joint lesions (“Daffner’s 11”)

1. Behaviour of the lesion
  - Osteolytic
  - Osteoblastic
2. Bone or joint involved
3. Locus within a bone
  - Epiphysis
  - Metaphysis
  - Diaphysis
  - Articular surface
4. Age, gender, race of patient
5. Margin of lesion
  - Sharply defined (slow-growing)
  - Poorly defined (aggressive)
6. Shape of lesion
  - Longer > wider = slow growing)
  - Wider > longer = aggressive
7. Joint space crossed
8. Bony reaction
  - Periosteal
  - Sclerosis
  - Buttressing
9. Matrix production
  - Osteoid
  - Chondroid
  - Mixed
10. Soft tissue changes
11. History of trauma or surgery

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

137

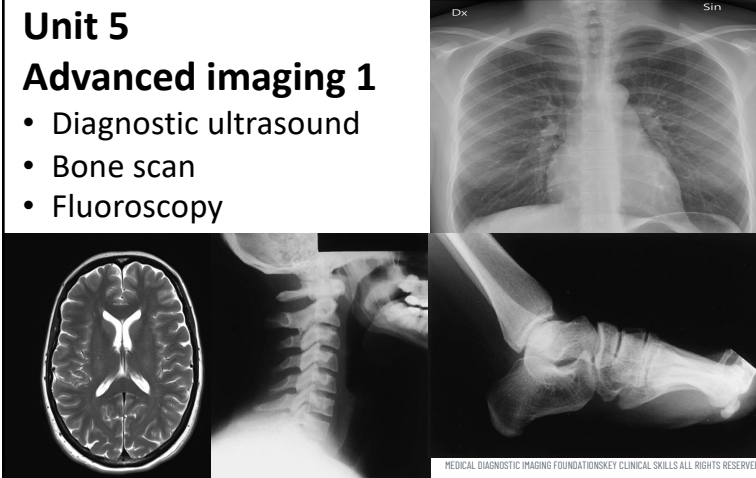

## Medical Imaging Foundations

### Unit 5

### Advanced imaging 1

- Diagnostic ultrasound
- Bone scan
- Fluoroscopy

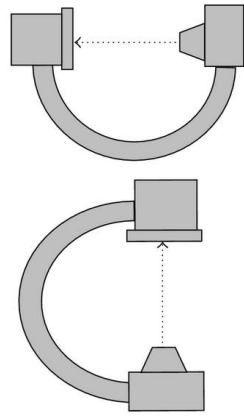

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

138

## Fluroscopy

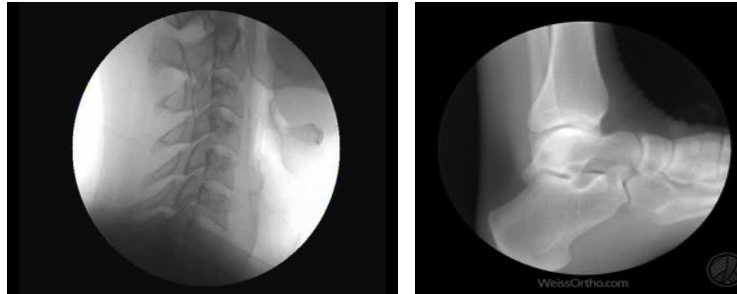

- X-ray examination in real time
- Receptor screen connected to X-ray source so that both move simultaneously (C-arm)
- Patient is positioned within C arm
- Used in fracture fixation, arthrography, discography, facet injections, biopsy, surgery etc.

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONSKEY CLINICAL SKILLS ALL RIGHTS RESERVED

139

## Fluoroscopy

144

## Fluoroscopy

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

145

## Bone Scan

- Patient injected with a marker (Technetium - 99m Phosphate) to reflect increase blood flow.
- Marker is absorbed by hydroxyapatite crystals in bone in areas of increase metabolic activity (infection, recent trauma neoplasm).

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

146

## Bone Scan

Very useful in diagnosis of:

- Subtle fractures
- Avascular necrosis
- Decrease blood flow
- Osteomyelitis
- THA/TKA loosening

3 phase most reliable for diagnosis of non displaced scaphoid fractures

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

147

## Bone Scan

X-ray read as normal

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

148

## Bone Scan

### Advantages

- Highly sensitive modality

### Disadvantages

- Low specificity
- Somewhat invasive (injection required)

### Primary use:

- Localizing bone tumors
- Detecting skeletal metastases
- Early diagnosis of stress fractures

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

149

## Diagnostic Ultrasound

- Frequency range of 1 – 15 Mhz
- Pulser delivers bursts of US in 1000 to 5000/ min. range
- Greatest intensity at centre of beam “focal zone”
- Higher frequencies
  - Less spread
  - More likely to be reflected off tissue interfaces
  - Do not travel as far as lower frequencies

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

150

## Diagnostic Ultrasound

**White areas**

- Represent “echoic” structures
- Transmit & reflect waves
  - Soft tissue
  - Muscles, fat
  - Vessels, nodes
  - Masses

**Black areas**

- Represent anechoic structures
- Transmit but do not reflect waves
  - Fluid

**Lines**

- Represent boundaries between structures with different echoic properties

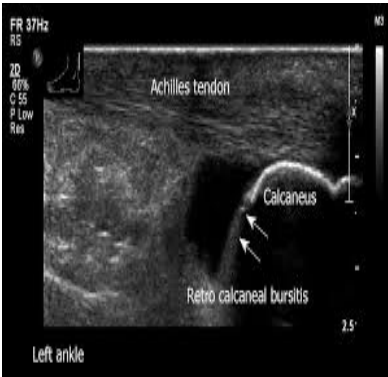

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONSKEY CLINICAL SKILLS ALL RIGHTS RESERVED

151

## Diagnostic Ultrasound

**Tissue characteristics**

- Air —near total reflector (scatter reflector)
- Fluid - near total propagation (no reflection)
- Bone - near total reflection
- Soft tissue - partial propagator / partial reflector

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONSKEY CLINICAL SKILLS ALL RIGHTS RESERVED

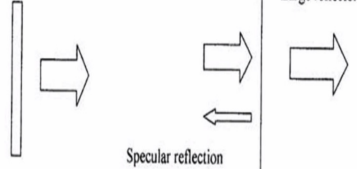

152

## Diagnostic Ultrasound

### Reflections

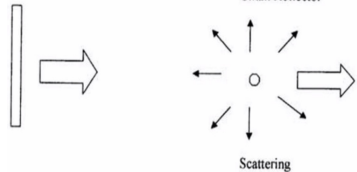

#### Specular

- Echoes from large smooth structures
- Relatively intense (bone)

#### Scattered

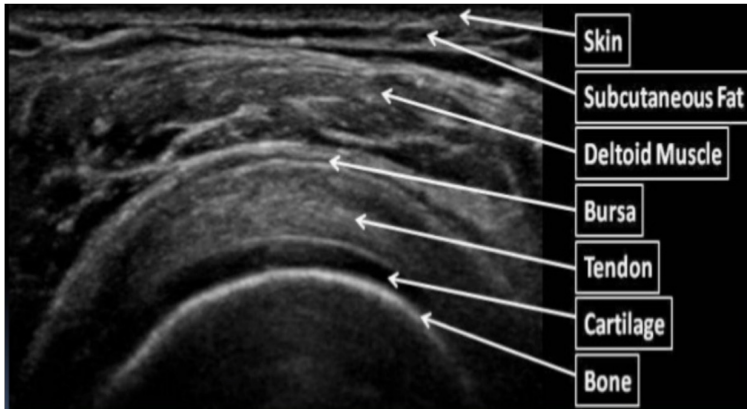

- Echoes from relatively small irregular shaped objects (red blood cells)

MEDICAL DIAGNOSTIC IMAGING FOUNDATION KEY CLINICAL SKILLS ALL RIGHTS RESERVED

153

## Diagnostic Ultrasound

MEDICAL DIAGNOSTIC IMAGING FOUNDATION KEY CLINICAL SKILLS ALL RIGHTS RESERVED

154

## Diagnostic Ultrasound

Tissue	Characteristics
Cortical bone	Hyperechoic, smooth, continuous
Tendons, ligaments	Hyperechoic, distinct parallel fiber pattern
Muscle	Hypoechoic, parallel fibrous hyperechoic bands
Bursa	Thin hyperechoic line
Hyaline cartilage	Hypoechoic layer next to hyperechoic cortex
Nerve	Hyperechoic relative to muscle
Cysts	Anechoic

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

155

## Diagnostic Ultrasound

- Extensive chronic bursitis.
- Thickened synovial bursal layers (*B*),
- Mimics a thickened rotator cuff tendon (SSP) (ie, tendinosis)

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

156

## Diagnostic Ultrasound

- Full-thickness tear of the supraspinatus tendon.
- The deltoid muscle (*D*) lies directly on the humeral head (*H*), thus mimicking the rotator cuff. \*

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

157

## Diagnostic Ultrasound

Massive full-thickness tear of the supraspinatus tendon.

- The moderately hypoechoic layer (*ST*) is subcutaneous soft tissue.
- The hypoechoic layer between the deltoid muscle (*D*) and humeral head (*H*) is intra-articular fluid (*F*).
- The deltoid muscle should not be mistaken for the rotator cuff \*.

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

158

## Pathological US image characteristics

Pathology	Characteristics
Fracture	Break in continuity, uneven surfaces
Tendon /ligament strains	Thickening of mixed echogenicity (hypoechoic if inflammation or hematoma) Disrupted fiber pattern
Tendon/ligament rupture	Disruption of structures, (hypoechoic if acute hematoma) Separation of structure ends
Muscles strain	Disruption of fibrous bands (hypoechoic in acute hematoma)
Muscle rupture	Retraction of muscle stumps
Bursitis	Increased width of bursa (should be thin line)
Cartilage damage	Inhomogeneous thickness, (early stage), Irregularity and disruption (later stages)
Nerve compression	Flattening, swelling proximal to compression (axonal flow blockage)
Distended /abnormal cyst	Increased volume, thickened walls, internal debris

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONSKEY CLINICAL SKILLS ALL RIGHTS RESERVED

159

## Clinical utility of ultrasound

### Advantages

- Affected area may be placed in variety of positions
- Can activate musculotendinous structure during examination
- Can apply traction/compression during examination
- Can stress ligaments during examination
- Just as accurate as MRI for imaging muscles
- Can demonstrate internal structure of tendons
- Comparable to MRI for imaging ligaments
- Can demonstrate inflammation in nerves
- Can predict risk of fracture from osteoporosis

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONSKEY CLINICAL SKILLS ALL RIGHTS RESERVED

160

## Clinical utility of ultrasound

### Limitations

- Limited field of view
- More operator dependent than other modalities
- Doesn't penetrate bone
- Does not cross air interface
- Obese patients do not image well

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONSKEY CLINICAL SKILLS ALL RIGHTS RESERVED

161

## Diagnostic Ultrasound

### Utility

**Shoulder:**

- Dx of RC tears

**Hip:**

- Congenital hip dysplasia, iliopsoas bursitis

**Knee:**

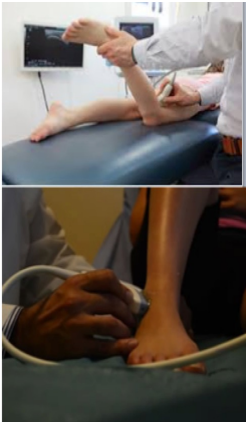

- Articular cartilage thickness & intra-articular effusions

**Fractures:**

- Healing progression

**Other:**

- Soft tissue masses
- Hematoma
- Tendon rupture
- Abscesses
- Foreign bodies

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONSKEY CLINICAL SKILLS ALL RIGHTS RESERVED

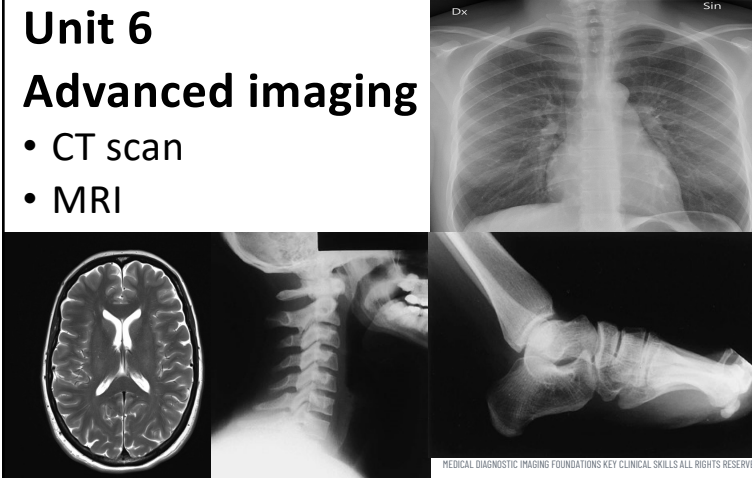

162

## Medical Imaging Foundations

### Unit 6

### Advanced imaging

- CT scan
- MRI

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

163

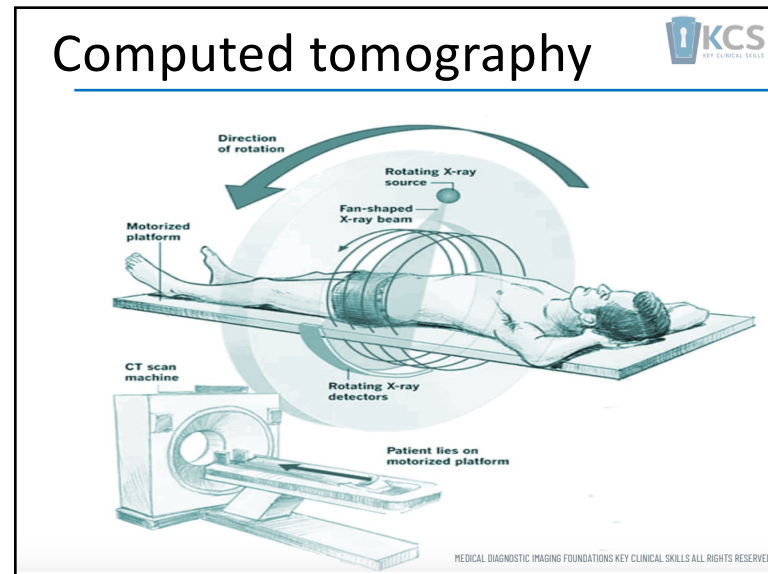

## Computed tomography (CT)

- Use high intensity X-ray
- Scanner moves around patient
- Creates series of “slices”
- Spiral scanners in common use
- Faster scan times
- Controlled overlap between slices
- Can be set for “bone window “ or “soft tissue window”

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

164

165

166

## Viewing CT images

### Radiodensities

- CT accurately reflects the radiodensity in shades of grey
  - Is still an X-ray
  - Is still a negative image
- Volume averaging smooths images but loses detail

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

167

## Viewing CT images

### Axial image

- Displayed as if patient lying in supine and viewed from caudo to cephalic
- **You are looking up from below**
- Left side of image is pt's right side

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

168

## Clinical utility of CT

- Loose bodies in joints
- Subtle fractures
- Degenerative changes
- Serious trauma
- Spinal stenosis
- Accurate measurement of osseous alignment in any plane
- Claustrophobic patients (less “tight” than MRI)

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

169

## Advantages of CT

- Less expensive
- Greater availability
- Faster image times
- Less operator time
- Thinner slices
- Less loss of image quality (motion)
- Greater resolution power for cortical bone
- Easier imaging for patients with ferrous metal implants

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

170

## Radiation dose of CT exams

Examination	Effective dose	Chest X-ray equivalent
CT brain	2.8	140
CT chest	6.2	310
CT abdomen & pelvis	17.2	860
CY whole aorta	13.4	670
CT pulmonary vessels	3.6	180
CT cervical spine	2.1	105
CT lumbar spine	2.7	135

176

## Magnetic Resonance Imaging (MRI)

### Computer system

- Receives RF signal
- Digital signal sent to processor
- Transformation into image

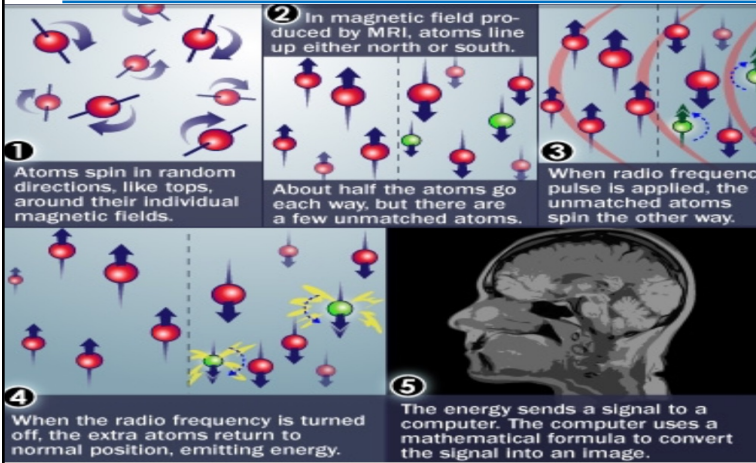

*Maher 2018*

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

177

## Magnetic Resonance Imaging (MRI)

- 1 Atoms spin in random directions, like tops, around their individual magnetic fields.
- 2 In magnetic field produced by MRI, atoms line up either north or south.
- 3 When radio frequency pulse is applied, the unmatched atoms spin the other way.
- 4 When the radio frequency is turned off, the extra atoms return to normal position, emitting energy.
- 5 The energy sends a signal to a computer. The computer uses a mathematical formula to convert the signal into an image.

## Clinical Utility of MRI

- Sensitive to changes in bone marrow – bone tumors and avascular necrosis
- Soft tissue detail – tears in tendon and ligaments
- Replaces invasive investigations – meniscal, labral tears (“open it up and have a look”)
- 3 dimensional capability means can stage neoplasms
- More sensitive than bone scan for bone metastases (bone scan still a good screening tool)
- Differential diagnosis of disc herniations and other nerve root impingements

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

193

## Advantages of MR

- Greater contrast resolution for soft tissue imaging
- Greater ability to image organs surrounded by bone
- No ionizing radiation
- No artifacts from interfering bone
- Less risk of missing disease as pathology missed on T1 is found on T2 and vice versa
- Greater image quality in non-axial planes

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

194

## Abnormal findings on MRI

Pathology	T1 weighted signal	T2 weighted signal
Inflammation	Decreased	Increased
Acute Hemorrhage	High	Moderate
Sub-acute Hemorrhage	Moderate high	Moderate low
Soft-tissue calcifications	Low	Low
Soft-tissue tumors	Low	High
Bone tumors	Variable	Variable
Acute fractures	Low	Low
Stress fractures	Low	High

## Medical Imaging Foundations

# Unit 7

# Fractures 1

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

202

## Fractures

### Radiological features

- Focal discontinuity in the structure of the bone (cortical lines)
- Displacement of bone
- Focal alteration in the smooth contour of the bone
- Change in shape of bone
- Linear region of sclerosis

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

203

## Fractures

### Radiological features

- Lucent line
- Avulsion fragment
- Double density
- Lipo-hemarthrosis or fat/blood interface "FBI" sign
- Abnormal fat pad
- Displaced fat pad

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

204

## Injury

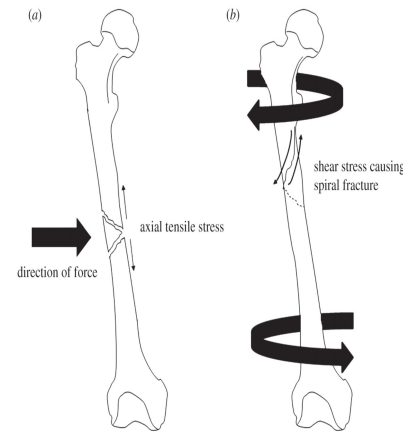

### Direct force

- Bone breaks at point of impact,
- Soft tissues are also damaged at this site

### Indirect force

- Bone breaks at a distance from where force is applied
- Repetitive stress
- Pathological fractures

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

205

## Fracture patterns

Some fracture patterns reveal the dominant mechanism:

- Spiral-twisting
- Oblique-compression
- Triangular-bending
- Transverse-tension

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

206

# Fractures

## Fatigue fractures

- AKA “stress fractures”
- Occur in normal bone subjected to repeated heavy loads
- Typical in; athletes, dancers new military recruits

## Pathological fractures

- Inflammatory (Paget’s disease)
- Infective (Osteomyelitis)
- Neoplastic (Ewing’s sarcoma)
- Nutritional (Rickets)
- Genetic (Osteogenica Imperfecta)
- Drugs (steroids and methotrexate)

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

207

# Fractures

- X ray is the fundamental tool in diagnosis of fractures
- High specificity “Rule in” (If you see a fracture then there is probably a fracture)

**BUT**

- Just because you don’t see it does not mean it’s not there
- Essential to get 2 views “one view is none view”

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

208

## Fractures

- X ray is the fundamental tool in diagnosis of fractures
- High specificity “Rule in” (If you see a fracture then there is probably a fracture)

**BUT**

- Just because you don’t see it does not mean it’s not there
- Essential to get 2 views “one view is none view”

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

209

## Fractures

**Fracture classification**

Consistent terminology

- Provides treatment guidelines
- Predicts prognosis
- Improves communication

1. Anatomic description
2. AO classification
3. Salter-Harris classification
4. Gustillo open classification
5. Fracture specific classifications

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

210

## Fracture terminology

### Anatomic Description

- Things that may be used to describe fractures:
  - Open vs closed
  - Anatomic location of fracture
  - Fracture line
  - Relationship of fracture fragments
  - Special classifications

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

211

## Anatomic description

Describes the precise anatomic location of the fracture

- States:
  - If left or right
  - Name of bone
- Location:
  - Long bones divided into thirds
    - Proximal
    - Middle
    - Distal

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

212

## Anatomic description

- Besides location it is helpful to describe if the location involves the adjoining joint space “intra-articular”
- “Intra-articular fracture of the base of the first metacarpal”

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

213

## Anatomic description ?

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

214

## Anatomic description ?

“Simple, transverse, non-comminuted distal radial and ulnar fracture with 100% radial translation, 45 degrees apex ulnar angulation and 2 cm of shortening”

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

215

## Open vs Closed

### Closed fracture

- Simple fracture
- No open wounds of skin near fracture

### Open fracture

- AKA “Compound fracture”
- Cutaneous (open wounds) of skin near fracture site
- Open fractures are open displaced and/or comminuted
- Medical emergency

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

216

## Open vs Closed

**Radiographic signs of open fracture**

- Soft tissue defects
- Bone fragment protruding beyond soft tissues
- Gas in soft tissues
- Intra-articular gas
- Presence of foreign body
- Missing bone fragments

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

217

## Open Fractures

**Gustillo Classification**

Used to classify open fracture based on quantity of soft tissue damage

<p><b>Grade 1</b></p> <ul style="list-style-type: none"> <li>• &lt;1 cm wide</li> <li>• Min. tissue injury</li> <li>• Wound clean &amp; min. comminution</li> <li>• Av. union in 21-28 wks.</li> </ul>	<p><b>Grade 3A</b></p> <ul style="list-style-type: none"> <li>• Wound &gt; 10 cm wide</li> <li>• Wound crushed &amp; contaminated</li> <li>• Soft tissue coverage possible</li> <li>• Av. union 30-35 wks</li> </ul>
<p><b>Grade 2</b></p> <ul style="list-style-type: none"> <li>• &gt;1 cm wide</li> <li>• Mod. tissue injury &amp; contaminated</li> <li>• Mod. comminution</li> <li>• Av. union in 26- 28 wks.</li> </ul>	<p><b>Grade 3B</b></p> <ul style="list-style-type: none"> <li>• Wound &gt; 10 cm wide</li> <li>• Wound crushed /contaminated</li> <li>• Soft tissue cannot cover</li> <li>• Requires free flap</li> <li>• Av. union 30-35 wks</li> </ul>
	<p><b>Grade 3C</b></p> <ul style="list-style-type: none"> <li>• Major vascular injury</li> </ul>

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

218

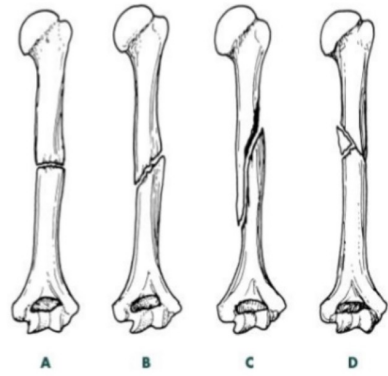

## Fracture lines

---

**Types of fracture lines**

- A. Transverse
- B. Oblique
- C. Spiral
- D. Comminuted

A      B      C      D

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

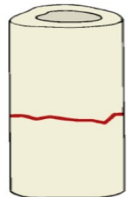

219

## Fracture lines

---

LOADING MODE

Tension ↑	Compression ↓	Bending ↔	Torsion ↻
			
↓ Transverse	↑ Oblique	↔ Butterfly	↻ Spiral

FRACTURE TYPE

The type of fracture line is dependent on type of load applied to bone

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

220

## Fracture lines

**Spiral fractures**

- AKA “Torsion fracture”
- Only possible from twisting force
- Typical of specific mechanisms of injury
  - Skiing
  - Child abuse

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

221

## Fracture lines

There is also impacted fractures where the fracture ends are:

1. Compressed together (i.e. vertebral compression fractures)
2. Distracted apart (i.e. avulsion fractures)

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

222

## Fracture lines

**Comminution**

- Measure of the number of pieces of broken bone
- Mild
- Moderate
- Severe

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

223

## Fracture lines

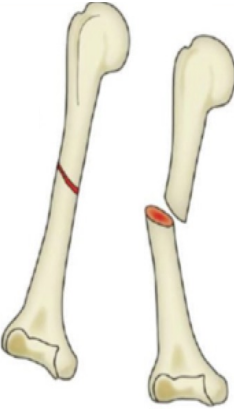

**Displacement**

Amount the pieces have moved from their normal location

**Fracture displacement**

Dependent on:

- Force of the injury
- Effects of gravity
- Pull of muscles attached to site

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

224

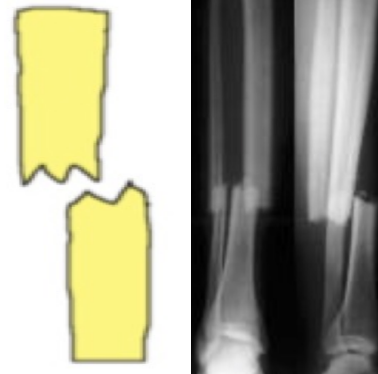

## Relationship of bone fragments

### Translation

- Sideways movement of fracture
- Usually described as % of diameter of the bone

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

225

## Relationship of bone fragments

### Displacement

### Angulation

- Amount of bend at a fracture
- Described in degrees
- With respect to the apex of the angle or with respect to direction of distal fragment

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

226

## Relationship of bone fragments

### Displacement

### Shortening

- AKA “bayonette apposition”
- The amount a fracture is collapsed
- Expressed in cm.

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

227

## Fracture description?

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

228

## Fracture description?

“Simple, transverse, non-comminuted mid-shaft radial and ulnar fracture with 30 degrees apex radial angulation”

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

229

## AO Classification

- 1<sup>st</sup> number = long bone
- 2<sup>nd</sup> number = segment

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

230

## AO Classification

- Letter (A, B, C) = fracture type
- 3<sup>rd</sup> 4<sup>th</sup> numbers = fracture group & sub-group

Morphology

Type	Group	Subgroup
A B C	1 2 3	.1 .2 .3
3 types	3 groups	3 subgroups

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

231

## AO Classification

### AO app

Pictures

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

232

## Salter-Harris Classification

Only used for pediatric fractures that involve the physis (growth plate)

- Five types
- Prognostic value for future bone growth disruption

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

233

## Salter-Harris Classification

### Type 1

- Fracture is across the physis with no metaphyseal or epiphyseal injury
- Low risk of growth disturbance

Type 1 - 5%

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

234

## Salter-Harris Classification

### Type 2

- Fracture is across the physis which extends into the metaphysis
- Most common
- Variable growth disturbance
  - Depends on location (rare in wrist but high in distal femur)

Type 2 - 75%

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

235

## Salter-Harris Classification

### Type 3

- Fracture is across the physis
- Which extends into the epiphysis
- Variable growth disturbance
- Anatomic reduction important as fracture involves joint

Type 3 - 10%

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

236

## Salter-Harris Classification

### Type 4

- Fracture is across the physis with metaphyseal and epiphyseal injury
- Low risk of growth disturbance

Type 4 - 10%

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

237

## Salter-Harris Classification

### Type 5

- Fracture is across the physis with no metaphyseal or epiphyseal injury
- Physis has been compressed
- High risk of growth disturbance

Type 5 - uncommon

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

238

## Salter-Harris Classification

Use the Salter-Harris system to classify these fractures

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

239

## Salter-Harris Classification

II                      III                      IV

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

240

## Greenstick Fractures

- Incomplete fractures of long bones
- Usually seen in children under 10 yrs
- Commonly mid-diaphyseal
- Affect forearm & lower leg
- Distinct from Torus fractures

241

## Torus Fracture

### AKA “buckle fractures”

- Incomplete fractures of shaft of long bone
- Characterized by bulging of cortex
- Result from trabecular compression from axial load (long axis of bone)

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

242

## Compression Fractures

- Vertebral collapse of at least 15-20% in height
- Loss of bone density (osteoporosis) often the underlying cause
- Spinal malignancy also possible

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

243

## Fractures of rings

Complete rings of skeletal bone seldom fracture in only one location

- Jefferson
- Hangman's
- Obturator foramen
- Pelvic ring
- Spinal canal

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

244

## Fracture Summary

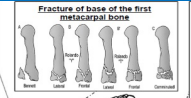

**Frykman Classification of Distal Radial #**

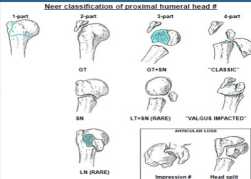

**Table 1. Frykman's Classifications or Colles' Fracture**

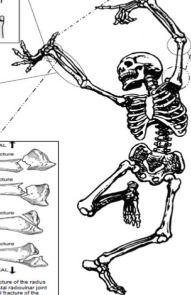

Type	Fracture
I	Intra-articular radial fracture
II	Extra-articular radial fracture with an ulnar fracture
III	Intra-articular fracture of the distal radius
IV	Intra-articular fracture of the radius with an ulnar fracture
V	Fracture of the volar ulnar joint
VI	Fracture over the radioulnar joint with an ulnar fracture
VII	Intra-articular fracture involving the carpal and radioulnar joints
VIII	Intra-articular fracture involving the carpal and radioulnar joints with an ulnar fracture

**Fracture of base of the first metacarpal bone**

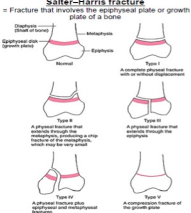

**Neer classification of proximal humeral head #**

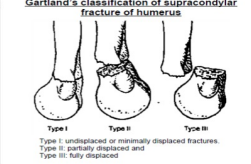

**Salter-Harris fracture**  
= Fracture that involves the epiphyseal plate or growth plate of a bone.

**Gartland's classification of supracondylar fracture of humerus**

Type I: undisplaced or minimally displaced fractures.  
Type II: partially displaced and  
Type III: fully displaced.

**ORTHOPAEDICS CLASSIFICATION PART 1 (UPPER LIMB)**

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

246

# Fracture Summary

**Letournel classification acetabular #**

**Russel Taylor classification of subtrochanteric #**

**Schatzker classification of tibia plateau #**

**Winquist classification of femoral shaft fracture**

**Pipkin classification of femoral head fracture**

**Garden classification of femoral neck #**

**Evan classification of intertrochanteric #**

**Lisfranc classification of tarsometatarsal injury**

**Sanders classification of calcaneal fractures**

**ORTHOPAEDICS CLASSIFICATION PART 2 (PELVIC & LOWER LIMB)**

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

247

# Medical Imaging Foundations

## Unit 8

## Fractures 2

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

248

## Factors affecting bone healing

- **Age** – Fractures unite faster in children
- **Type of bone** – Faster union in flat & cancellous bone
- **Fracture pattern** – Spiral > oblique > transverse > comminuted
- **Disturbed patho-anatomy** – Soft tissue inter-position and ischaemia prevent faster healing
- **Immobilization** – Depends on bone (scapula & ribs not needed)
- **Open fracture** – Often go into delayed union &/or non-union
- **Compression fractures** – Enhances union (cancellous) & primary bone healing (cortical)

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

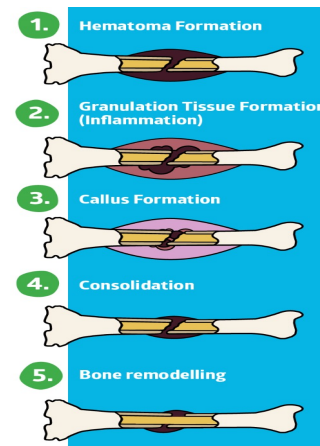

249

## Fracture Healing

Reparative process of self-healing (*union*) occurs in stages:

- Fracture hematoma (d/t bleeding, edema)
- Granulation tissue → osteoid (3 – 14 days post injury)
- Ossification (3 wks – 6 mos)
- Consolidation (distance between fragments decreases → closes).
- Remodeling (union completed; remodels to original shape, strength)

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

250

251

## Fracture Complications

### Delayed / non-union

**Biological Causes:**

- Inadequate blood supply
- Severe soft tissue damage affects fracture healing by:
  - Reducing muscle splintage
  - Damaging local blood vessels
  - Diminishing osteogenic input from mesenchymal stem cells within muscle

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

252

## Fracture Complications

### Biomechanical

- Imperfect splintage
- Over-rigid fixation
- Infection
- Periosteum stripping

### Patient-related

- Poor / non-compliance to weight bearing restrictions
- Obesity
- Nutritional (Rickets)

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

253

## X-ray investigation

### Rule of two's

#### 2 views

- A fracture or dislocation may not be seen on a single x-ray.
- 2 views at right angles must be taken.

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

254

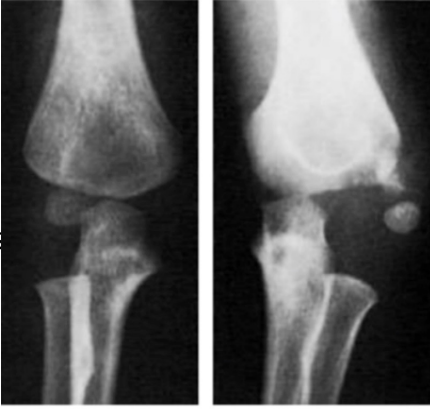

## X-ray investigation

### Rule of two's

#### 2 limbs

- In children, the appearance of immature epiphyses may confuse the diagnosis.
- Contralateral uninjured limb comparison needed

R L

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

255

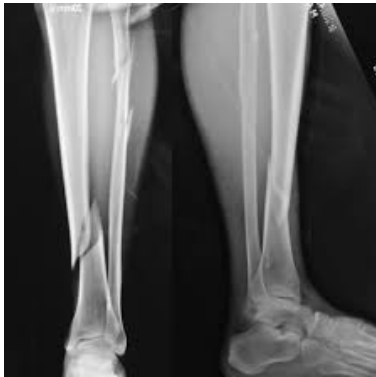

## X-ray investigation

### Rule of two's

#### 2 injuries

- Severe force often causes injuries at more than 1 site
- Fractures of rings

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

256

## X-ray investigation

### Rule of two's

### 2 joints

- In the forearm or leg one bone may be fractured & slightly angulated
- However significant angulation is not possible unless other bone is broken too

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

257

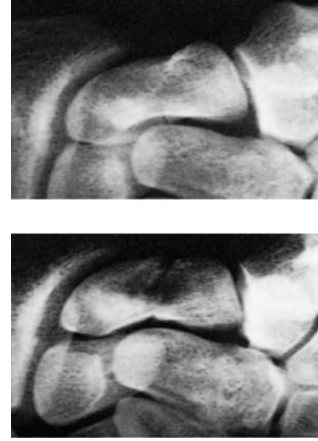

## X-ray investigation

### Rule of two's

### 2 occasions

- Some fractures notoriously difficult to detect early.
- Second x-ray (delayed by 1-2 weeks) may reveal it (distal clavicle, scaphoid femoral neck, lat. maleolus)

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

258

## Advanced imaging

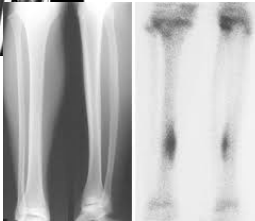

### CT

- May be helpful in lesions of the spine or for complex joint fractures (ie. calcaneus, acetabulum)

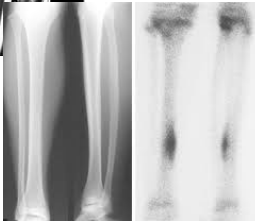

### MR

- May be the only way to demonstrate if spine fractures are threatening spinal cord

### Bone scans

- Helpful in diagnosing suspected stress fractures

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

259

## Fracture Complications

### Visceral Injuries

- Fractures around trunk
  - Penetration of lung by rib fractures can cause pneumothorax
- Rupture of bladder or urethra in pelvic fractures
  - Can cause peritonitis
  - Require emergency treatment

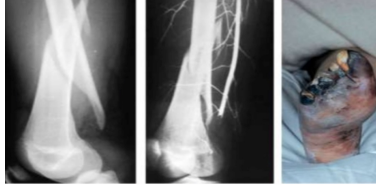

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

260

## Fracture Complications

### Vascular Injuries

- Ischemia distal to fracture site

Injury	Vessel
First rib fracture	Subclavian
Shoulder dislocation	Axillary
Humeral supracondylar fracture	Brachial
Elbow dislocation	Brachial
Pelvic fracture	Presacral and internal iliac
Femoral supracondylar fracture	Femoral
Knee dislocation	Popliteal
Proximal tibial	Popliteal or its branches

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

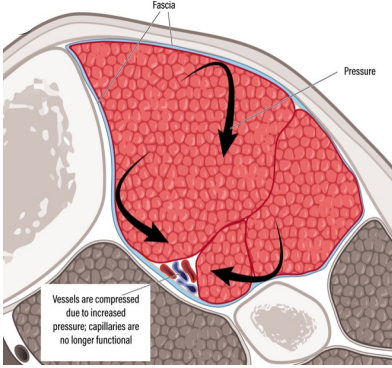

261

## Fracture Complications

### Compartment Syndrome

**“Six Ps”**

1. Paresthesia
2. Pain
3. Pressure
4. Pallor
5. Paralysis
6. Pulselessness

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

262

## Fracture Complications

### Volkman's Ischemic contracture

- Severe manifestation of compartment syndrome
- Permanent flexion contracture of hand, wrist & fingers

#### Most affected

- Flexor digitorum profundus
- Flexor pollicis longus

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

263

## Fracture Complications

### Venous Thrombosis

- Veins of lower extremities & pelvis highly susceptible to thrombus formation after fracture, especially hip fracture
  - Venous stasis caused by incorrectly applied casts or traction
  - Local pressure on a vein
  - Immobility
- Lack of anti-coagulant prophylaxis

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

264

## Fracture Complications

### Fat Embolism Syndrome (FES)

#### Clinical Manifestations

- Usually occur 24-48 hours after injury
- Interstitial pneumonitis
- Rapid and acute course
- Feeling of impending disaster
- Patient may become comatose in a short time
- Produce symptoms of Acute Respiratory Distress Syndrome (ARDS)

### Symptoms of ARDS:

- Chest pain
- Tachypnea
- Cyanosis
- Dyspnea
- Apprehension
- Tachycardia

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

265

## Fracture Complications

### Fractures that most often cause FES:

- Long bones
- Ribs
- Tibia
- Pelvis

### Tissues most often affected:

- Lungs
- Brain
- Heart
- Kidneys
- Skin

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

266

## Fracture Complications

### Closed nerve injuries

Seldom severe  
90% recovery in 4 months

### Open nerve injuries

- Poor prognosis
- Should be surgically repaired if possible

Injury location	Nerve
Shoulder dislocation	Axillary
Humeral shaft	Radial
Humeral supracondylar	Radial/Median
Elbow medial condyle	Ulnar
Monteggia fracture-dislocation	Posterior inter-osseous
Hip dislocation	Sciatic
Knee dislocation	Peroneal

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

267

## Fracture Complications

### Hemarthrosis

- Intra-articular fractures
- Joint swells rapidly
- Patient resists all movements
- Fat pad sign
- Aspiration and lavage recommended

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

268

## Fracture Complications

### Infection

- Gustillo classification of open fractures

### Early osteomyelitis

- May present as wound inflammation & discharge

### Late osteomyelitis

- May present with a sinus
- X-ray evidence of sequestra

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

269

## Fracture Complications

### Gas Gangrene

- Produced by clostridia infection
- Toxins cause necrosis of tissue & promote spread of disease

### Clinical features

- Intense pain
- Swelling round wound
- Brown discharge
- Little to no pyrexia
- Increase pulse
- Characteristic smell
- Rapid decline to coma & death

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

270

## Fracture Complications

### Myositis ossificans

- Heterotropic ossification post-injury

#### Common sites:

- Post-dislocation of elbow (brachialis)
- Post femur # (quadriceps)
- 8 weeks palpable and x-ray visible

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

271

## Fracture Complications

### Avascular necrosis

#### Common sites

- Head of femur
- Proximal part of scaphoid
- Lunate
- Body of talus

#### Consequences

- Deformation of bone
- OA in few years
- Pain
- Limitation ROM

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

272

## Fracture Complications

### Growth disturbance

- In children due to damage to physis
- Salter-Harris type 3 & 5 most at risk

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

273

## Fracture Complications

### Fracture blisters

- Clear fluid filled vesicles
- Occur during limb swelling

### Plaster & pressure sores

- Friction from splints/casts
- Bed sores from immobilization (pelvic, hip fractures)

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

274

## Fracture Complications

### Joint instability

- Ligamentous injury at time of fracture
- Recurrent dislocation

### Stiffness

- Knee, elbow, shoulder

### Arthritis

- Post intra-articular fracture

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

275

## Dislocations

Complete & persistent displacement of a joint at which at least part of supporting joint capsule some of its ligaments are disrupted

### Congenital

- Hip

### Acquired

- TB hip, septic arthritis
- Neurological (Polio, CP)
- Inflammatory disorders RA

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

276

## Dislocations

Dislocations are named by the relative position of the distal segment in relationship to the proximal one

**Q:** Describe the dislocation.

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

277

## Dislocations

Dislocations are named by the relative position of the distal segment in relationship to the proximal one

**Q:** Describe the dislocation.

**A:** “This is an anterior dislocation of the knee”

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

278

## Dislocations

Possible at all joints

### Most common at:

- Shoulder
- AC joints
- Hip
- Patella
- Elbow
- MCP joints
- Facet joints

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

279

## Dislocations

### Acute Complications

- Injury to peripheral nerve  
blood vessels

### Chronic sequelae

- Recurrent dislocation
- Traumatic OA
- Joint stiffness
- Avascular necrosis
- Myositis ossificans

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

280

## Dislocations

### Shoulder dislocation

#### Anterior

- Sub-coracoid
- Sub-glenoid
- Sub-infraclavicular
- Inferior

#### Posterior

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

281

## Dislocations

### Acromio-clavicular dislocation

#### AKA “shoulder separation”

- MOI fall on point of shoulder

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

282

## Dislocations

### Posterior Hip dislocation

- Generally dashboard injury

Thomas & Epstein classification

Type	Characteristics
1	Posterior dislocation without significant posterior wall fragment
2	Dislocation with large posterior wall fragment
3	Dislocation with comminuted posterior wall fragments
4	Dislocation with acetabular floor fracture
5	Dislocation with femoral head fracture

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

283

## Dislocations

### Elbow dislocations

MCP, MTP, IP Dislocations

- MOI FOOSH

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

284

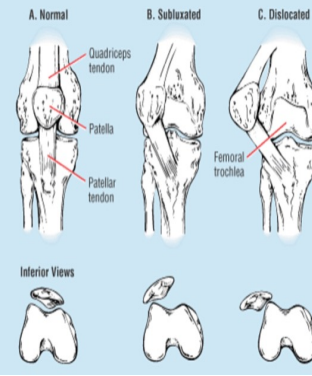

## Dislocations

### Patellar dislocations

Type	Dislocation	Pain	Swelling
Acute	Trauma	+	+
Recurrent	Occasional in response to trauma	+	+
Habitual	Each time knee is flexed	-	-
Congenital	Since birth	-	-

#### Subluxed vs dislocated

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

285

## Dislocations

### Facet Joint Dislocation

**AKA “Jumped facets”**

- Commonest cervical spine orthopaedic injury
- Medical emergency
- May lead to quadriplegia
- May require open reduction

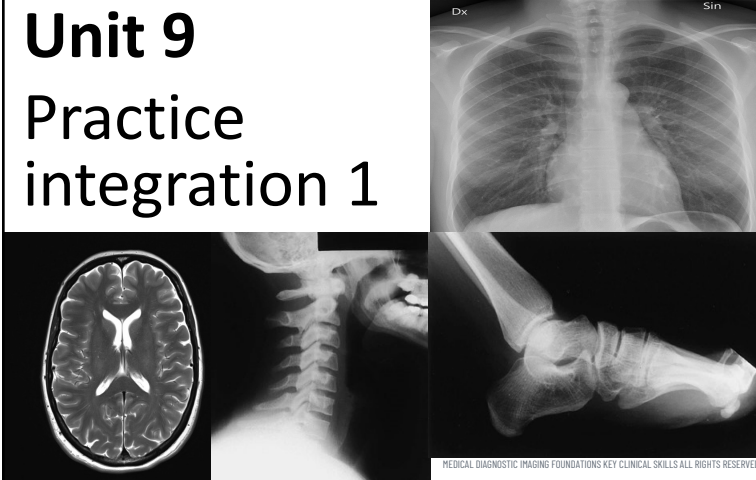

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

286

 **What view is this?**

- A. Antero-posterior lumbar spine
- B. Lateral lumbar spine
- C. Lateral lumbo-sacral spine

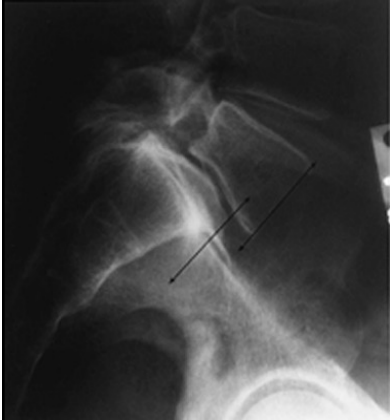

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

306

## Practice integration

**?** **What view is this?**

- C. Lateral lumbo-sacral spine
- This is a “coned”, or close-up, lateral view of the lumbo-sacral articulation.

308

## Practice integration

 The *lined arrows* represent a disruption in the \_\_\_\_\_.

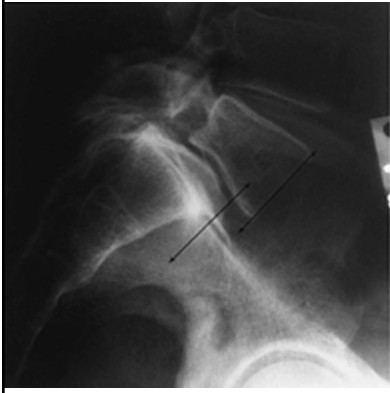

- A. anterior vertebral body line
- B. posterior vertebral body line
- C. lateral vertebral body line

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

309

## Practice integration

 The *lined arrows* represent a disruption in the \_\_\_\_\_.

- A. anterior vertebral body line
- The *anterior vertebral body* line represents the connected anterior borders of the vertebral bodies and normally forms a continuous lordotic curve.

## Practice integration

**?** This pathology is described a \_\_\_\_\_

- Degenerative spondylolisthesis, grade 1+
- This degenerative spondylolisthesis is differentiated from fracture spondylolisthesis by the intact vertebra. The grade is determined by the amount of forward displacement. L5 has translated forward by more than 25 percent of its depth, so the grade is 1+.

## Practice integration

### femoral neck

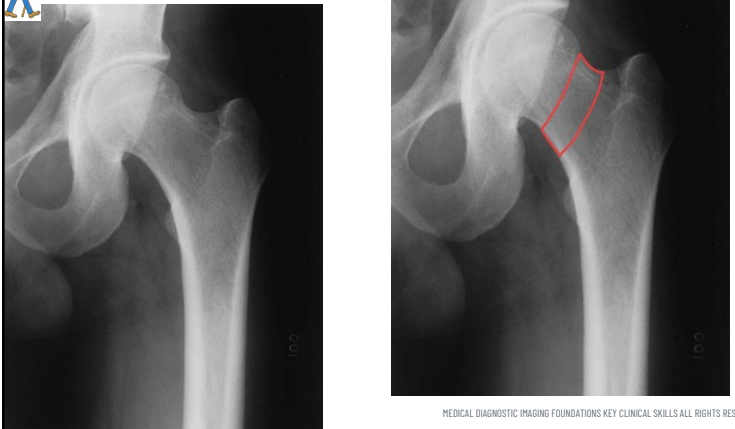

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

The image shows an anteroposterior (AP) radiograph of a hip joint. The femoral neck is clearly visible, connecting the femoral head to the shaft. The acetabulum and the proximal femur are also visible.

315

## Practice integration

### femoral neck

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

The image consists of two side-by-side anteroposterior (AP) radiographs of a hip joint. The left image is a standard AP view showing the femoral neck. The right image is the same AP view, but with a red outline highlighting the femoral neck region.

320

Practice integration 

 **What view is this?**

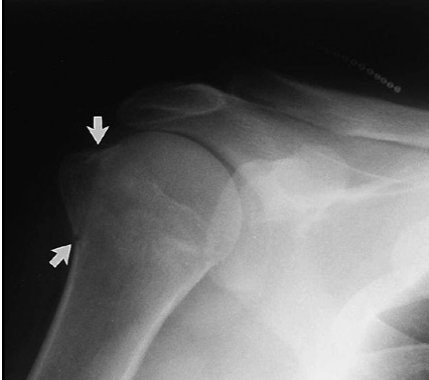

- A. antero-posterior external rotation
- B. antero-posterior internal rotation

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

321

Practice integration 

 **What view is this?**

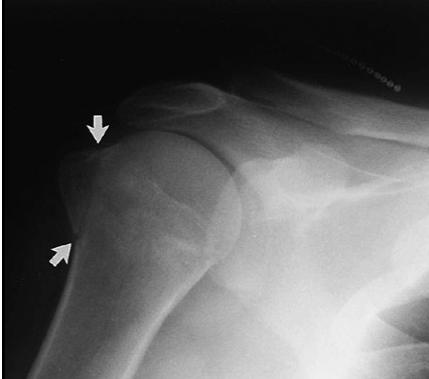

- A. antero-posterior external rotation
- The image of the greater tuberosity, and not the lesser tuberosity, determines that this is an external-rotation view.

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

322

## Practice integration

 **What do the arrows point to?**

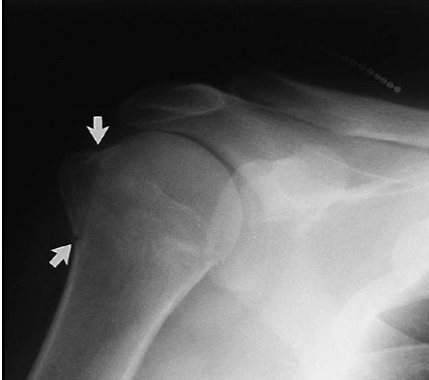

- A. surgical neck fracture
- B. greater tuberosity fracture
- C. lesser tuberosity fracture

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

323

## Practice integration

 **What do the arrows point to?**

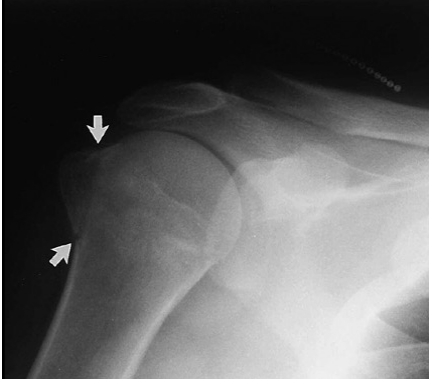

- B. greater tuberosity fracture
- A complete, vertically oriented fracture line is evident through the greater tuberosity.

324

Practice integration 

 **What can be said about the subacromial joint?**

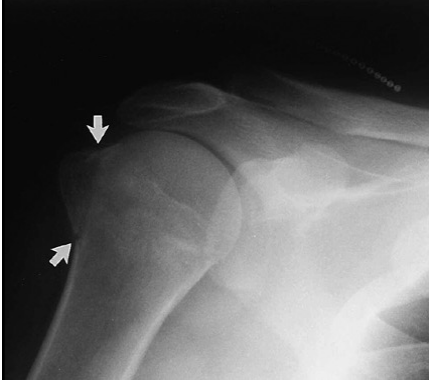

- A. The joint space appears normal.
- B. The joint space appears decreased.
- C. The joint surface has also been fractured.

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

325

Practice integration 

 **What can be said about the subacromial joint?**

- A. The joint space appears normal.
- B. The joint space appears decreased.
- C. The jointsurface has also been fractured.

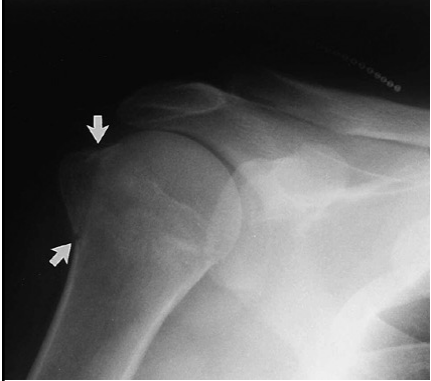

MEDICAL DIAGNOSTIC IMAGING FOUNDATIONS KEY CLINICAL SKILLS ALL RIGHTS RESERVED

326

## Practice integration

**? What do the arrows point to?**

- B. The joint space appears decreased.
- The joint space appears abnormally decreased. There are no signs of osteoarthritis at present, such as Subchondral sclerosis or spurring. It is not clear why the joint space is decreased. Possibilities include a spasm of the deltoid that would pull the head of the humerus superiorly, or simply error in patient positioning due to the fact that this is a trauma exam and positioning is not always perfect.
